General Information

Name, middle, last name: Eldar Abdulla Habib-zade

Date of birth: 04 - May – 1977

Marital Status: Married

Language Proficiency

Azeri: native

English: advanced B1

Russian: fluent

Hobby and Interests

Latest technologies, new techniques, sport, dances, psychology, cars, football.

Mobile status

Can take a business trip several times in year.

Pretended position and compensation

Specialization: System engineer, DevOps

Employment type: full time, remote full time

References - available upon request.

Experience

STDC ltd (since 2024) – Sumqait city technologies data center.

Role: System engineer

Mcloud.az project, - management of 4 vcloud director cells, and 3 node nsx cluster. Updating cluster's configuration using Postman. Creating and deploying vcloud director based new products, which will be available for clients in the site's marketplace.

Atlassian representative's test task (middle 2024th)

Jira Datacenter and Jira Service management installation and configuration in stack with Nginx as an ssl reverse proxy with load balancer and backend application server as tomcat-apache, all requests is implemented by an ssl, including communication between nginx and tomcat.

Geekbrains – online university Digital-master DevOps course (since 2023)

Continued to developer-specialization block, now learning python advanced course

https://github.com/yaneproger/python/tree/master/8thSeminar-FileSystem

Completed developer-main block included C# and Python course, completed test on main block, now continue to studying java.

https://github.com/yaneproger/C/blob/master/TestWork291123/Program.cs

(Contract / National GovTech Project)Data Processing Center (MHM) / Infrastructure Integrator (since 2018) EID – Electronic Identity Cards PKI based infrastructure "Yeni nəsil şəxsiyyət vəsiqəsi" (new generation's id card)

Role: System engineer, after - team lid at Data processing center – DPC (MHM)

Supporting VMWARE based and HYPER-V based multi-site cloud infrastructure

Supporting government Microsoft -VMM based multi-site cloud production PKI infrastructure

EID project (Electronically identity cards of the citizens, electronically identity services)

https://mincom.gov.az/en/media-en/news/new-generation-id-cards-will-have-e-signature-certificates370

SIMA project – PKI based mobile signature service

https://sima.az/en/about

SINAM ltd. (since 2007) – IT-systems integrator company

Role: System engineer

IT-system integration system & network management

Planning creating and managing high-availability, scalable systems (Microsoft, VMWARE)

Deploying software on production and testing environment servers, which created by developers team.

Information Technologies Co. (since 2002) – IT-systems integrator company

Role: System engineer

IT-system integration system & network management

RISK Co. (since 2001) – IT-systems integrator company

Role: System engineer

IT-system integration, system & network management

Information Technologies Co. (since 1997) – IT-systems integrator company

Role: System Engineer – learning

Assembling computers, servers, racks

Sales management – goods management (computer equipment)

Managed ten junior employees and ensured the company's profitability.

Participated in the market development program.

Data entry, inventory control, order tracking and status report generation.

Creation of monthly audits, resolved any issues and improved procedures.

Education

1. nShield Certified System Engineer (nCSE) - Thales UK Cambridge (2018)

2. Microsoft Certified Solutions Associate (MCSA) - G684-8434 (2018) Window Server 2012

3. Oracle certification – TDC1001 Entry level servers and Oracle HW support - Oracle SouthAfrica (2014)

4. Oracle certification – TDC1002 Oracle-Sun storage support - Oracle SouthAfrica (2014)

5. Microsoft Certified Professional - MCP E368-8608 (2013)

6. Oracle Solaris 10, 11 System Administrator Certified Professional

7. Microsoft Certified Systems Administrator - D685-4660 (2012) Window Server 2003

8. Microsoft Certified Professional - MCP D190-4528 (2010) Windows XP Professional

9. State Technical University Bachelors of Arts (1998)

10. 17th State full middle school (1993)

Professional skills

Documentation:

Creating documents, which describes architecture, hardware and software applied on project

https://github.com/yaneproger/doc-example/blob/main/project-doc-example.pdf

Software:

Operation Systems - Linux(RHEL, Centos, Stream, OEL, Oracle Solaris etc.), Windows.

Virtualization: Microsoft Hyper-V, VMware Workstation, Esx, Esxi, Vcenter, Vcloud director, Nsx, Oracle, Proxmox .

Databases: Postgres, Mysql, Mariadb – installing configuring, creating tables, joins(right,left,full,etc.), so on.

Db ha, failover, lb: Mysql+etcd+haproxy+keepalived

Postgres+etcd+patroni+pgbouncer+haproxy+keepalived

Mssql - creating always-On availability group cluster from scratch, database maintenance, tuning, monitoring, Acl's, reorganize DB's Indexes, increasing performance, fix routine problems etc.

DNS Servers: MS DNS, BIND

Clusters – ms wsfc, Pacemaker with Corosync, Ceph Cluster

Backup: Veeam, MS DPM

Mail Servers: communigate, mdaemon, exchange, kolab, etc.

Webservers: apache, nginx, ms iis, configuration, load balancing, reverse proxy, etc.

Containerization: runc, lxc, docker, docker-compose, portainer – installation, configuration - containers, networks, volumes, yml files, stacks, creating, running, deleting etc.

Iac: Ansible – installation, configuration, playbooks, templates, etc.

Monitoring: Prometheus – configuring to get info from exporters

Grafana – creating, modifying dashboards to get metrics from prometheus.

CICD: Gitlab, Jenkins, Git - creating ci/cd pipelines.

Production PKI infrastructure implementation – Microsoft customized(w/mssql) or standard.

Networking – knowledge of osi and tcp/ip model, stp, rip, ospf protocols

Configuring and managing LAN, WAN, VPN, configuring cisco, hp hardware

SAN – creating and configuring san network, cabling, configuring san switches, zoning, monitoring, etc., san storages, creating, providing, modifying volumes, monitoring storage etc.

Experience in Atlassian Jira Datacenter, Atlassian Jira Service management installation and configuration. Configuring proxy and load balancer with Nginx, with various configurations (round-robin, least conn, ip-hash with or without weight). SSL/TLS Configuration with Tomcat to support forwarding requests to backend application via SSL.

Python programming experience

As result of main block – created phonebook program, which adds, removes, edits phonebook entries to any position of the list, phonebook is presented as text file

https://github.com/yaneproger/python/tree/master/Task8-FileSystem-070424

https://github.com/yaneproger/python/blob/master

C# programming experience

https://github.com/yaneproger/C/tree/master

PowerShell creating routine scripts for everyday work

https://github.com/yaneproger/powershell

Hardware:

Implementation of racks, Faraday cages at the customer's site. Cabling, installation, configuration of IBM System X servers, Dell, Sun Sunfire servers, HP ProLiant DL, BL, ML, HP Integrity, HP Blade System servers

Selected Projects

(Contract / National GovTech Project)Data Processing Center (MHM) / Infrastructure Integrator (since 2018)

Supervising a team of 3 in the “Certificate Services” department, implementing various daily tasks, including Microsoft AD environment, Microsoft AD Certificate infrastructure, MSSQL 2016 availability group, WSFC-based cluster, Microsoft System center VMM 2016, SCOM 2016 and DPM 2016 management.

Including, but not limited to: cluster management, monitoring, archiving (data backup), creating a WSFC-based 6-server distributed cluster, MSSQL 2016 availability group cluster and related infrastructure from scratch, creating HSM(n-Cipher) master key, nodes, related MSSQL 2016-based database and their tables, database maintenance plans. Changing users and their access levels in ACLs, reorganizing and rebuilding indexes, replacing Microsoft Certificate Service's own Jet database with PowerShell scripts. Removing outdated, expired, corrupted certificates or certificate requests from the database, etc.

Managing, monitoring, archiving (backing up data), cluster nodes, certificate service’s MSSQL and JET database, resolves connection problems, resolves network connection shortages, modifying profiles, protocols used, opening ticket, collecting and providing data for Microsoft support.

Managed Datacenter’s equipment including

HPE DL servers G6-G10, HPE Enclosure, enclosure-based BL servers. Managed HPE 3PAR StoreServ NFS storage and SAN switches and resolved routine problems.

CLIX - Baku State University

Installed and configured four HP DL360p G8 based rack servers in the BSU's datacenter. Installed and configured java based "CLIX" examination and learning management system. As an application server and load balancing server configured apache tomcat.

KINOFOND "DGIS" project

Installed, connected and configured HPE Enclosure C7000 based four HPE BL460c servers. Four node IIS based DFS cluster with network load balancing for "GOMAP" navigation website Installed and configured.

PKI CBA (Central Bank of Azerbaijan)

Installed and configured eight HP DL380 G8 based rack server infrastructure in the CBA's datacenter. Installed and configured Microsoft Windows server 2012 based localized cryptographic PKI infrastructure created by "SINGNALKOM" company (Notary-Pro, CA, RA, TSP servers, and related software).

Installed and configured server infrastructure for ESDS and ESAHS projects.

Azerpost (State Ministry of Communication)

Installed configured and connected HPE Enclosure C7000 based 14 HPE BL460c servers. Installed configured and supported Microsoft Terminal services and AD infrastructure.

UNDP Azerbaijan office, Main Medical Department of the Ministry of Justice

Installing and configuring Microsoft Windows server 2012 software and configured Cisco ASA 5505

Ability to adapt speedily to different environments.

Learning quickly from documentation.
